What is a Lexile measure?
A Lexile measure indicates the reading level of an individual or a book, and is represented as a number followed by an “L” (for example, 700L). By comparing your student’s Lexile measure with the Lexile measure of a book, you can decide whether its text demand will be too difficult, too easy or just right for your student’s reading ability. To best strengthen his or her reading skills, your student should read books within his or her Lexile range.

What is a student’s recommended Lexile range?
A student’s Lexile range spans from 100L below to 50L above his or her Lexile measure. When a student reads within his or her Lexile range, he or she should be able to comprehend enough of the book to make sense of it, while still being sufficiently challenged to maintain interest and learning.

How does a student get a Lexile measure in Kentucky?
Students in grades 3-8 receive a Lexile measure from the Kentucky Performance Rating for Educational Progress. Lexile measures will be included on the K-PREP score reports that parents receive in the 2013-2014 school year.

Should a student try to read books outside of his or her Lexile range?
A student can read books that are above or below his or her Lexile range. However, books that are below a student’s Lexile range may offer little challenge in terms of new vocabulary and complex grammatical structures. Similarly, books that are above a student’s Lexile range may be too challenging and discourage the reader.

Higher Lexile measures allow an advanced and enthusiastic reader to:
- be challenged with high-interest books above his or her Lexile level
- seek help with a hard but interesting book
- find other books on the same subject but at a higher Lexile level

Lower Lexile measures allow a struggling and reluctant reader to:
- build skills with less challenging books on topics of choice
- select high-low books based on Lexile and developmental levels
- find other books on the same subject but at a lower Lexile level

Does a student need a Lexile measure to use “Find a Book, Kentucky?”
No. “Find a Book, Kentucky” can estimate a student’s starting Lexile range based on his or her grade and comfort with the reading materials at that grade level. Then, based on the book search results, the student can further refine his or her Lexile range to select books that best support successful reading.

How is the Lexile measure of a book determined?
A book’s Lexile measure is based on two characteristics: word frequency and sentence length. Once these factors are determined, MetaMetrics uses a proprietary scientific equation to assign a Lexile measure to the text, ranging from below 200L for beginning-reader text to above 1600L for more advanced text. More than 160,000 books have Lexile measures, and this number continues to grow.

Is a Lexile measure the only criteria to consider when picking a book?
A Lexile measure is a measure of text complexity only. It does not address the subject matter or text quality, age-appropriateness of the content or a reader’s interests. The Lexile measure is one piece of information that you can use when selecting books.

Some books also have a Lexile code—a two-letter designation that appears before the Lexile measure (for example, AD580L)—to provide more information about the book’s developmental appropriateness, reading difficulty, and common or intended usage. Visit www.Lexile.com for more information on Lexile codes.
